Analysis**

01

Performance Assessment

How are they performing compared to target?

Will they meet their 2014 target?

Should either store be closed? Why or why not?

What should be done in the next year to maximize store profits?

Performance in 2013

Target & Actual Sales vs Store Number

Will the Store meet its target in 2014?

- Above visualization is for Store 5.
- We predict both Store 5 and 8 will meet their 2014 targets.
- Store 5 is estimated to achieve \$83.45 million, overachieving by 1.77%
- Store 8 is expected to hit \$36.36 million, exceeding annual target by 9.35%

How to maximize profits?

I

- Upselling and cross selling during peak days
- Expansion of most profitable product lines and variants
- Encourage repeat purchases by implementing loyalty programs

02

Bonus Allocation

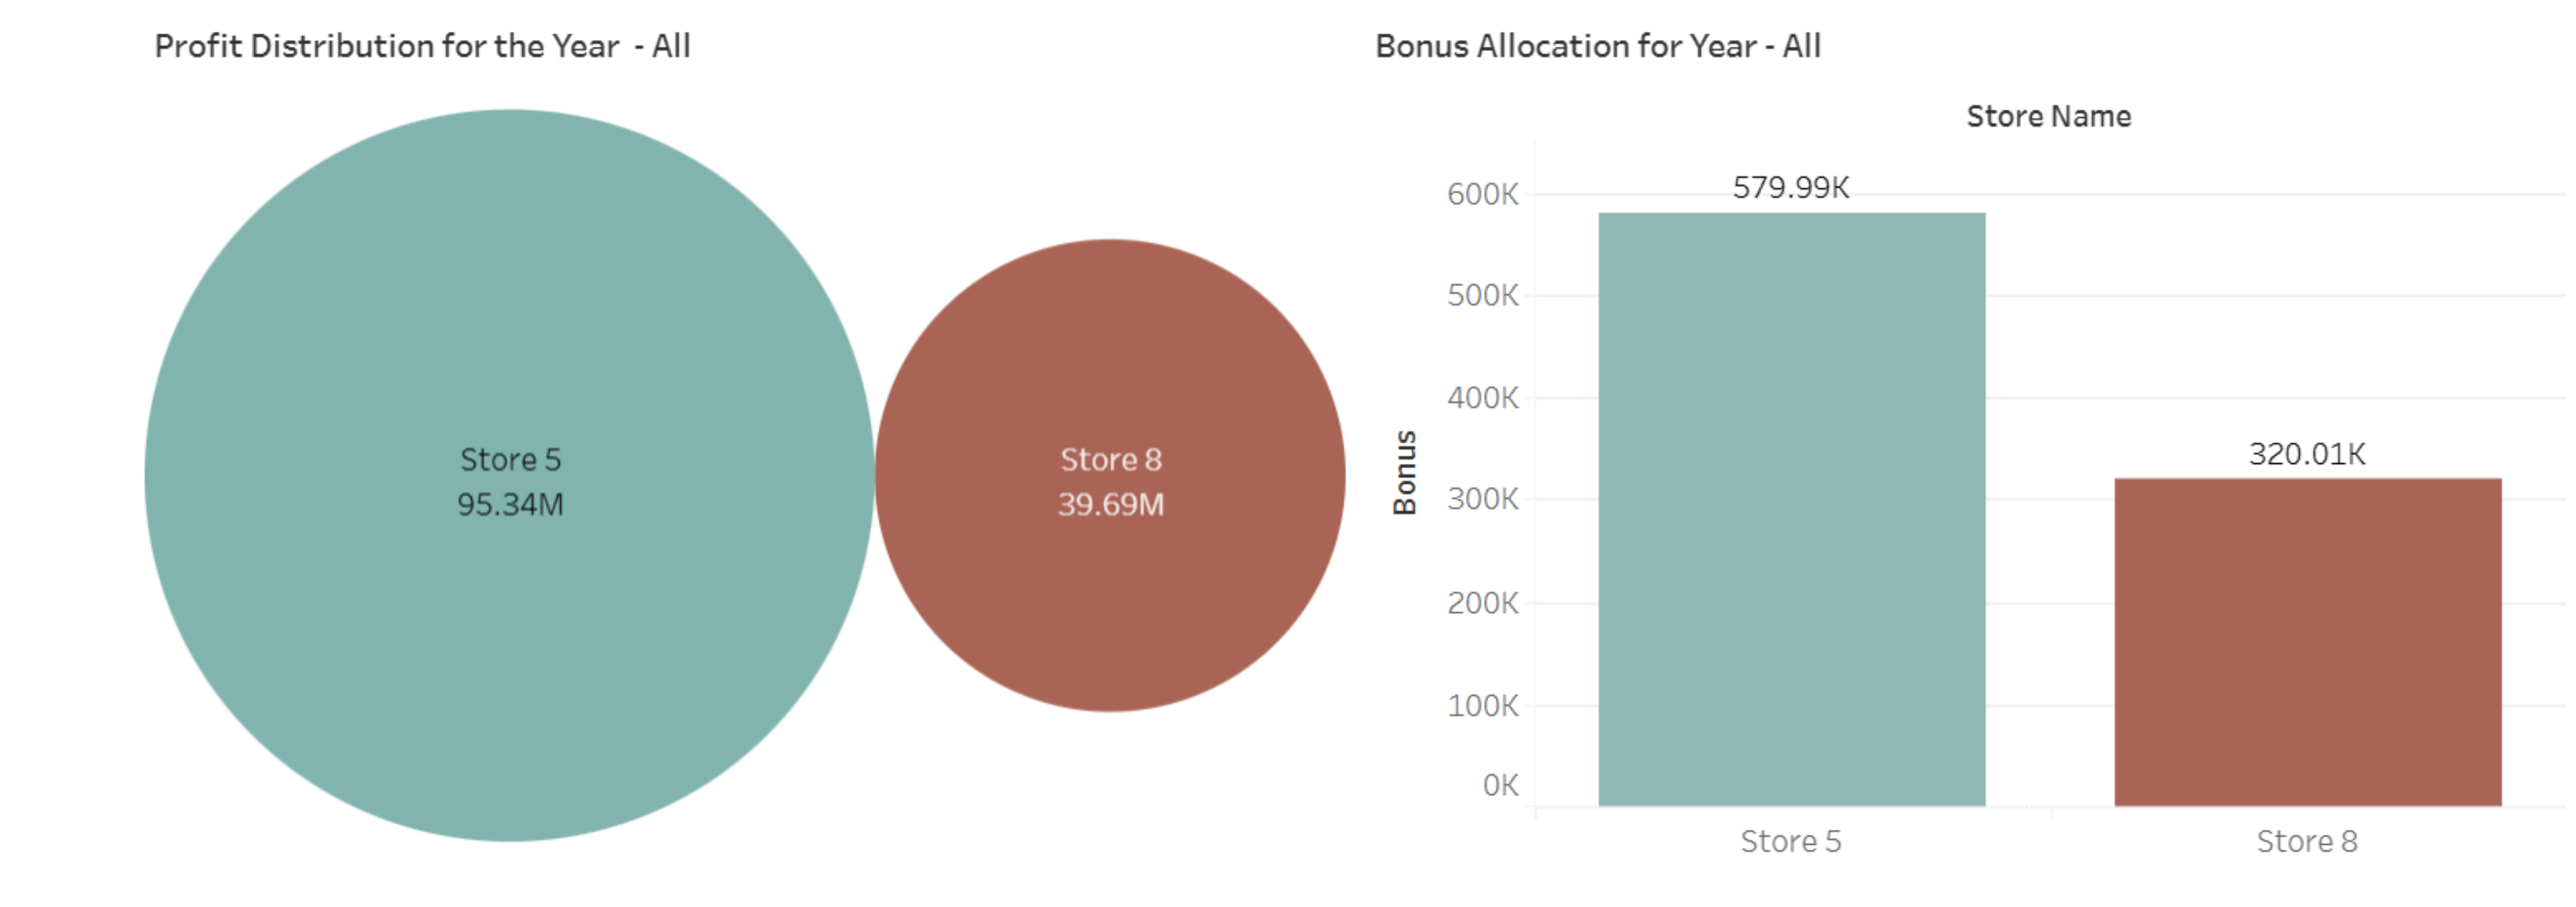

Recommend separate 2013 (bonus pool: \$500,000) and 2014 (bonus pool: \$400,000) bonus amounts for each store.

Comparing the Sale Amount and Sale Quantity for Store 5 and Store 8?

- From the above visualization we can see that the Total SalesAmount for Store 5 (145 Million) is more than double than that of Store 8 (60 Million). We have also compared the Sale Quantity for each store.
- In order to get the views for these visualizations I pulled store data and sale data from the respective fact and dimension tables and grouped them by year and store number.

Comparing the Profit Distribution and allocating Bonuses for Store 5 and Store 8

- The above visualization compares the Profit Distribution between the 2 stores. Based on the Sale Target Quantity, Sale Amount and Total Profit I have calculated and assigned Bonuses for both the stores in Snowflake Views.
- I used the individual bonuses for each year and based on the proportions of amount, quantity and profit for each year you can filter out to calculate either per year bonus or total bonus assigned.

What can we learn about sales trends?

Store 5

Peak Shopping Day
Friday (\$188K)

Weekly Sales Trends
Peak sales on weekends

Product Category

Women's and Men's
Apparel driving
weekend sales

Recommendations

Weekend spend and
save + Weekday happy
hour sales

Store 8

Peak Shopping Day
Saturday (\$65K)

Weekly Sales Trends
Consistent throughout
the week

Product Category

Relatively stable across
all days of week

Recommendations

Weekend product
bundling discount

Store 5

Weekly Sales Trend

- **Peak Profit Days:**

- Friday (\$188K)
- Saturday (\$182K)
- Aligns with consumer behavior

- **Lowest Profit Day:**

- Monday (\$100K)
- Post-weekend drop-off

- **Transaction Volume:**

- Similar trends but not as drastic

Lower average transaction values on workdays!
